

BiteFinder

Snap it. Describe it. Know what bit you.

BiteFinder: Snap it. Describe it. Know what bit you.

AI-powered bug bite identification and next-step guidance.

BiteFinder   

I was outside last night near a pond and woke up with a small, raised bump on my arm. It's itchy but not very painful.

This bite is most consistent with a **mosquito bite**.

Over-the-counter **antihistamine creams** and **calamine lotion** can help reduce discomfort. If swelling spreads, or you experience fever or body aches, **consult a healthcare provider**.

Would you like to learn more?

The Problem: People don't know if a bite is harmless or serious.

- **Parents:** Unsure if a child's bite needs treatment or a doctor visit.
- **Travelers:** Encounter unfamiliar insects and can't tell what's dangerous.
- **Hikers & Campers:** Prone to bites while outdoors, with little immediate access to medical guidance.

The Solution: BiteFinder - Smart, Safe Bug Bite Identification

Aggregate de-identified data:
Sell **insight** to retail or pharma

A detailed illustration of a stag beetle (Lucanus cervus) in a dark reddish-brown color. The beetle is shown from a top-down perspective, facing towards the upper left. Its most prominent feature is its large, branched mandibles (horns) at the front. The body is oval-shaped with a textured surface, and the legs are also branched. The beetle is positioned on a white, oval-shaped background that is placed on a light-colored, textured surface.
